

DESSALATOR AC PRO COMPACT & CAD

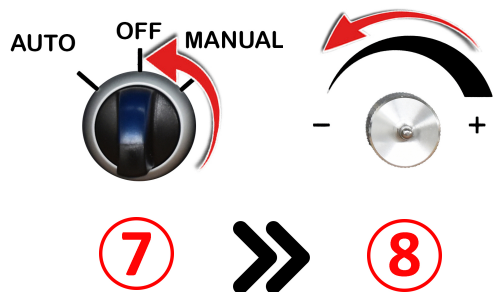

Quick Guide for regular use

START-UP PROCEDURE

- 1** Make sure the hull valve for the watermaker is opened, the selection valve on the pre-pump is in the sea water position and turn the pressure regulator knob almost fully counter clockwise (towards the [-] position).
- 2** Set the switch to MANUAL.
- 3** Press the START Button. The pre-pump will start, wait until only the YELLOW LED blinks.
- 4** Slightly increase the pressure up to 8 o'clock on the pressure gauge using the regulator knob. Stay in this position for about one minute.
- 5** Increase the pressure to 11 o'clock using the regulator knob. Stay in this position for about one minute.
- 6** Now you can increase the pressure to the green zone on the pressure gauge. When the water quality LED lights up green, your water maker produces fresh water.

SHUTDOWN PROCEDURE

- 7** Set the power switch to OFF, to stop the water maker.
- 8** Turn the knob pressure regulator almost fully counter clockwise (towards the [-] position).

This Quick Guide is intended only as a reminder for everyday use. Make sure you are familiar with the contents of the full manual before using your watermaker. See www.dessalator.com or flash this QR code.
